Bangladesh Army University of Science and Technology (BAUST), Saidpur

Department Computer Science and Engineering (CSE)

Course Tittle: Information System Design Sessional

Course Code: CSE 3210

Project Title: BAUST ALUMNI MANAGEMENT SYSTEM

Project Type: Web Based Information System

Presented By:

Name: Mst. Jugnu Khatun

ID: 0802410105101072

Name: Most. Arifa Akter Allo

ID: 0802410105101073

Name: Hasibul Hasib

ID: 0802410205101079

Presented To:

Teacher Name: AKZ Rasel Rahman

Designation: Lecturer, CSE, BAUST.

Teacher Name: MD. Rabby Hossain

Designation: Lecturer, CSE, BAUST.

Project Overview

Name, type, organization, location, and stakeholders at a glance

PROJECT NAME

Alumni Management System (AMS)

PROJECT TYPE

Web-based Information System (Academic)

ORGANIZATION

Bangladesh Army University of Science and Technology (BAUST), Saidpur

LOCATION

University Campus – Alumni Affairs Department

Key Stakeholders

- University Administration
- Alumni Affairs Office
- Alumni (Graduates)
- Current Students
- Faculty Members

THE CASE FOR THIS PROJECT

Project Motivation

Why the Alumni Management System was selected

PROBLEM

Fragmented Alumni Data

- No centralized database
- Records scattered across sheets & social media
- No structured student-alumni link

→

NEED

A Reliable Engagement Tool

- Track alumni across batches
- Support mentorship & referrals
- Coordinate events and donations

→

SOLUTION

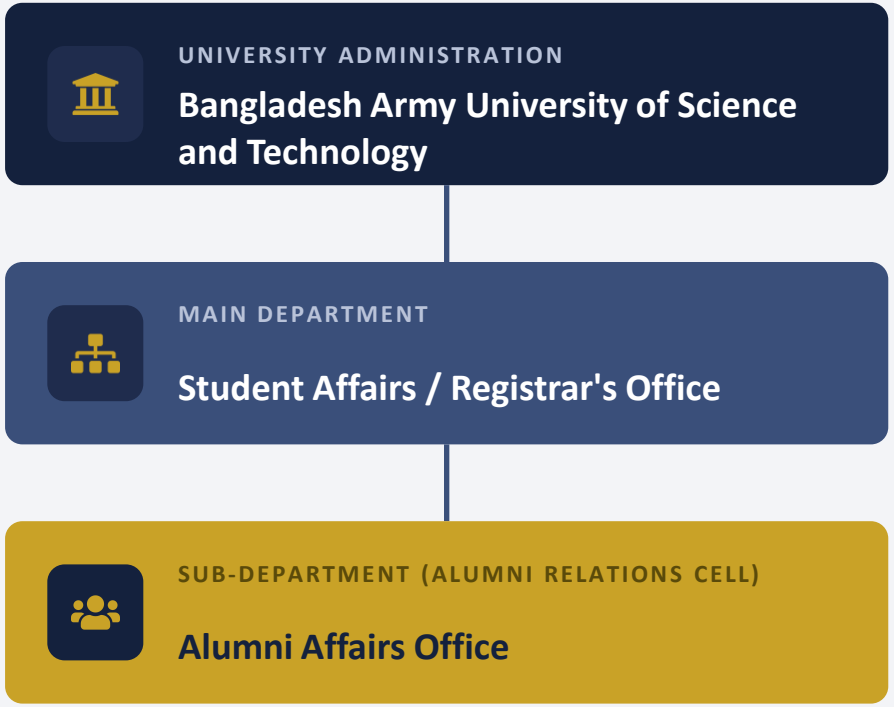

Alumni Management System

- Centralized alumni profiles
- Role-based web portal
- Analytics for engagement & giving

INSTITUTIONAL CONTEXT

Organization Structure

Department and sub-department this system belongs to

The Alumni Affairs Office operates under Student Affairs and is the direct owner of the proposed system.

WHO USES THE SYSTEM

User Identification

Primary users and how each interacts with the system

Admin

Alumni Affairs staff who manage records, events, and content.

Alumni

Graduates who update profiles, network, and join events.

Current Students

Students seeking mentorship, referrals, and alumni contacts.

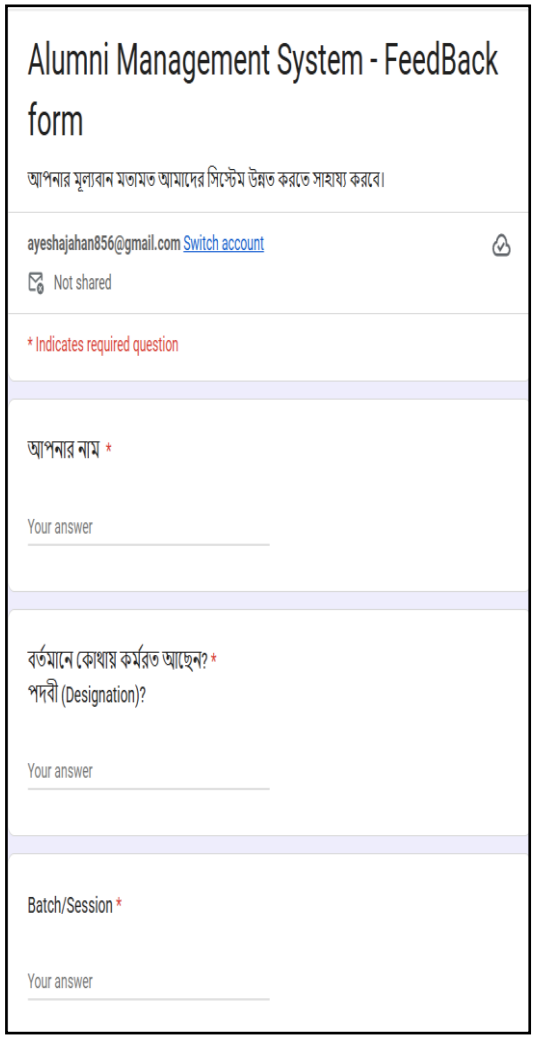

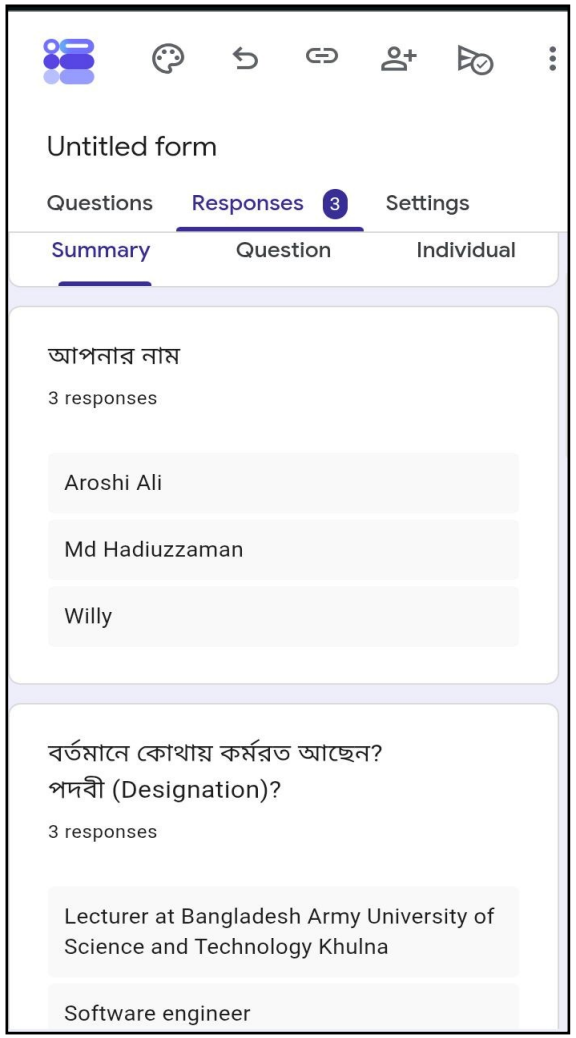

University Administration

Leadership viewing engagement analytics and reports.

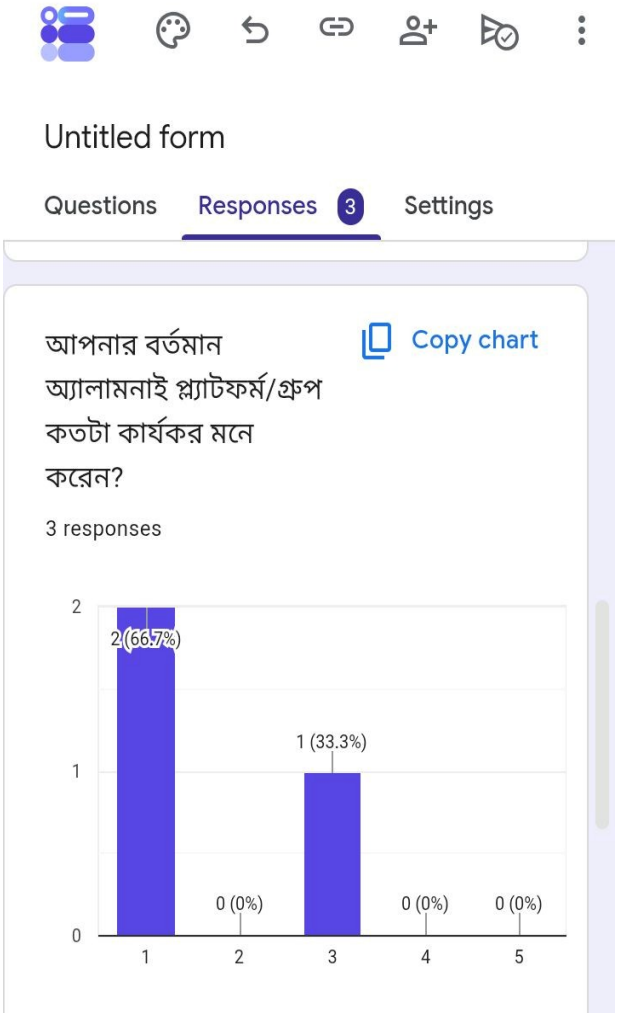

WORKING PROCESS & FEEDBACK EVIDENCE

Google Form feedback collected from alumni to validate system requirements

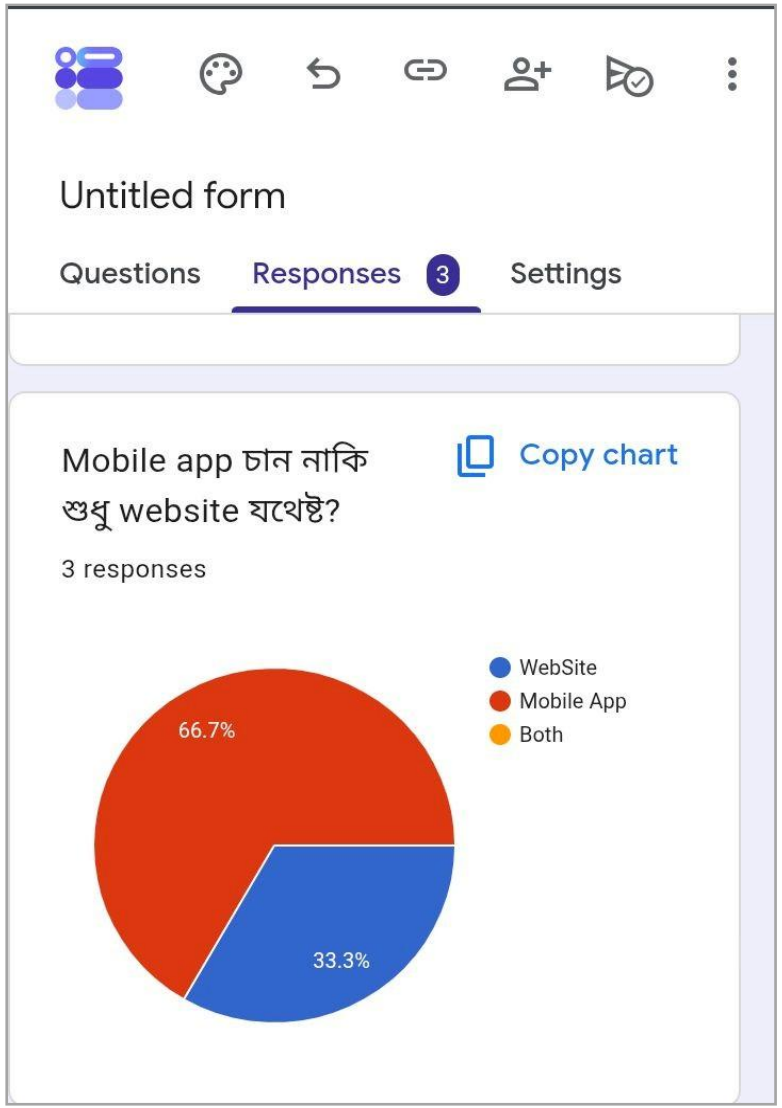

WORKING PROCESS & FEEDBACK EVIDENCE

Google Form link: https://forms.gle/4JpZ39HfiXLh8PJD9

Feedback Highlights

- **3 responses collected so far from alumni across multiple batches (6th, 12th, 14th) and roles (Lecturer, Software Engineer).**
- **66.7% rated the current alumni platform/group as poorly effective (score 1/5), confirming the need for a dedicated system.**
- **Discussion Forum was the most requested feature (100%), followed by Job Portal/Networking (66.7%).**
- **66.7% prefer a Website over a Mobile App, supporting the web-based system design.**
- **Open-ended responses are gathering UI/UX suggestions and additional feature requests to refine scope.**

CURRENT STATE

Existing Software / Current System

Assessing what is in place today

No Dedicated Software Exists

Most universities, including this one, do not operate a single, integrated Alumni Management Software. Alumni-related work is instead handled through a mix of manual and ad-hoc digital tools.

Google Forms

Used to collect alumni contact details during reunions and convocation.

Excel Spreadsheets

Alumni data stored locally with no validation or central access.

Facebook / WhatsApp

Informal groups used for updates, with no targeted delivery.

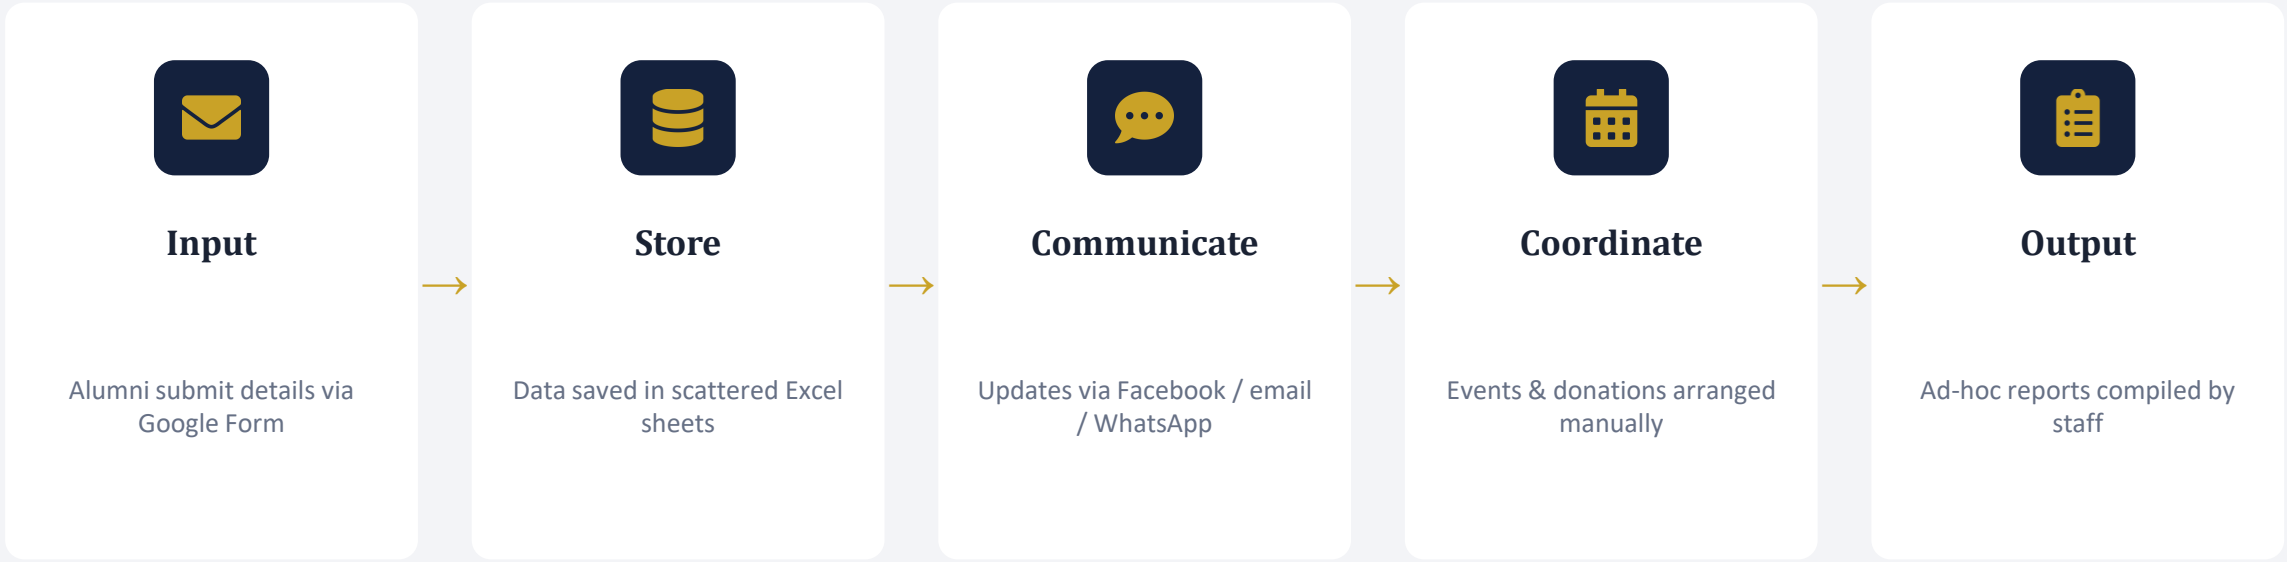

Manual Coordination

Events and donation drives coordinated by phone and email.

CURRENT WORKFLOW

Working Process of the Existing Practice

How the current manual process flows end to end

No system enforces this sequence today — each step depends on manual follow-up by Alumni Affairs staff.

GAP ANALYSIS

Existing System Analysis & Proposed Improvement

Comparing today's manual practice with the proposed system

Existing (Manual) System	Proposed / Improved System
Manual data collection via forms & sheets	**Centralized database with online profile submission**
No login – open, unsecured records	**Role-based secure login (Admin, Alumni, Student)**
Communication via informal social groups	**Built-in notifications and targeted messaging**
Donations & events tracked manually	**Dedicated modules for events, jobs, and donations**
No analytics or reporting capability	**Real-time dashboard with engagement analytics**

CORE OPERATIONS

Main Activities of the Organization

Core functions carried out by the Alumni Affairs Office

Database Maintenance

Keeping alumni contact and career records accurate and current.

Reunions & Events

Organizing get-togethers, seminars, and networking sessions.

Career Support

Connecting alumni with students for mentorship and referrals.

Fundraising

Running donation campaigns for scholarships and campus projects.

Newsletters & Updates

Publishing regular news about university and alumni achievements.

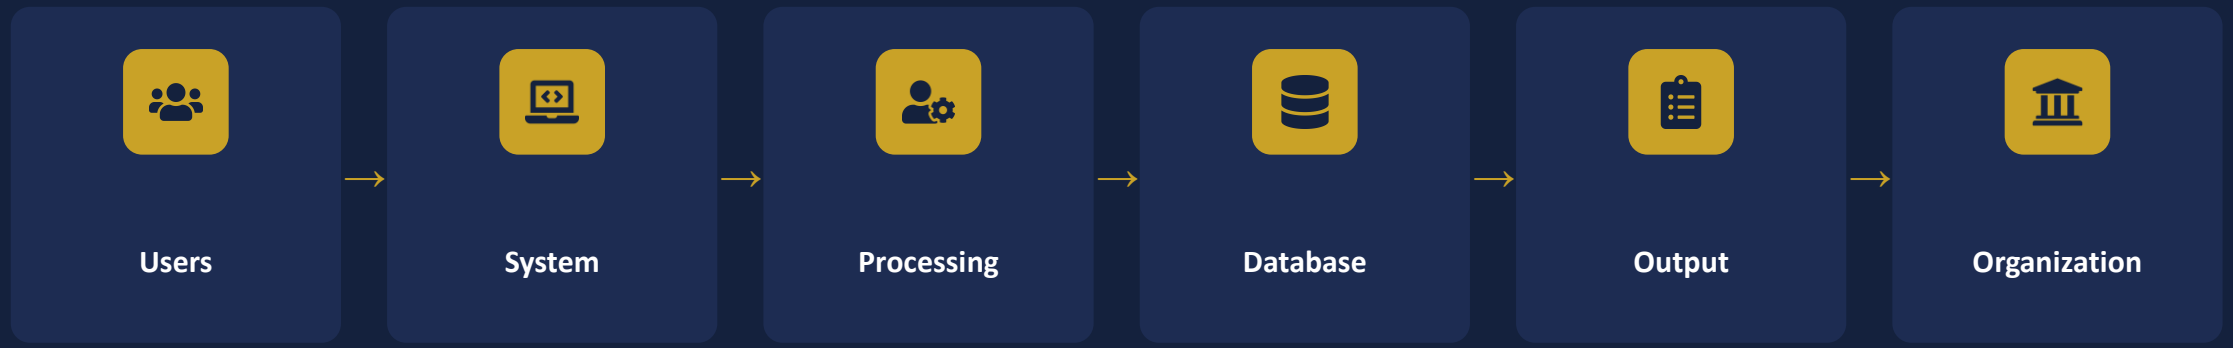

Chapter Coordination

Managing regional and international alumni chapters.

THE PROPOSED SYSTEM

Overall System Workflow

How the proposed system will support the organization's activities

A single connected pipeline replaces today's scattered, manual coordination.

PROBLEM → SOLUTION

Key Problems & Proposed Solutions

Major organizational problems and how the system addresses each

PROBLEM	PROPOSED SOLUTION
No centralized alumni records	**Unified profile database with search & filters**
Poor alumni-student interaction	**Mentorship & networking module with messaging**
Manual, error-prone event planning	**Integrated event calendar with RSVP tracking**
No visibility into engagement or giving	**Analytics dashboard for admin decision-making**

Expected Benefits

What the organization gains from the proposed system

Improved Efficiency

Faster processing of alumni records and requests.

Reduced Manual Work

Automation replaces spreadsheet-based upkeep.

Better Data Management

Centralized, validated, and searchable records.

Faster Service

Instant access to profiles, events, and reports.

Improved Accuracy

Fewer errors from duplicate or outdated entries.

Better Monitoring

Real-time dashboard for tracking engagement.

WRAPPING UP

Conclusion

Bangladesh Army University of Science and Technology(BAUST) currently manages alumni relationships through manual, disconnected tools spreadsheets, forms, and social media groups. This limits engagement, visibility, and the university's ability to support alumni and students alike.

The proposed Alumni Management System introduces a centralized, role-based web platform improving data accuracy, communication, and long-term alumni engagement.

> ***A connected alumni network is a stronger university this system turns scattered records into lasting relationships.***

Key Takeaway

Thank You

Questions & Answers
